

Orthopedic and Rehabilitation technology from Freiburg - Germany

Pfänder is an orthopedic technology company with a long tradition. The company has 50 employees and is located in the southwest of Germany, in Freiburg.

The majority of the production is in orthopedic and rehabilitation technology. Pfänder is specialized in aid supply for children and provides an orthopedic workshop in the Clinic of the University of Freiburg. The location of the company in Freiburg offers a high recreation value for patients.

Freiburg is the sunny capital of the Black Forest, close to the French and Swiss borders. The many day trip destinations in and around Freiburg guarantee a pleasant time for all. www.freiburg.de

Orthopedic Technology Prosthetics

Arm prostheses

Arm prostheses are able to provide the most important basic functions, for example, a missing hand – i.e. open, closing and appearance. Pfänder offer cosmetic, manual operated and myo-electronic components for arm prostheses.

Leg prostheses

We offer different models of knee joints, different types of foot prostheses and appropriate adapter pieces. The selection of the knee joints range from pneumatic and hydraulic controls to computer-controlled knee joint systems like the C-Leg manufactured by Otto Bock.

Prostheses for Children

Prostheses for children and young people are particular technological challenge due to the size of the prostheses and the fact children grow at an accelerated rate. In this product line we use particularly light, stable and functional modules, adapted to the special needs of children.

Silicone products

Functionality and wearing comfort is the center of attention of silicone products. Color and style can be individually modified and adjusted. High-quality materials, expertise and experiences of our technicians become the key factor in the production of concept aid from silicone.

Ortheses

Ortheses

Ortheses build strength from the outside and help the body to stabilize, immobilize, relax or correct. Our orthosis product line range from body orthoses for spinal correction to paralysis orthoses for the lower extremities, which are manufactured using gypsum models. We also manufacture orthoses for the upper and lower thigh in carbon fiber technology.

Ortheses for Children

Special emphasis of our production is the orthopedic technology for children. Our expert technicians have many years of experience. Modern manufacturing methods and material like "carbon" and "preg" are important for the orthopedic technology as well as the special handling of different diseases like "ICP" or "Spina Bifida". We are specialized in manufacture the propriozeptiv "Nancy Hylton Ortheses".

Rehabilitation technology

The department of Rehabilitation Technology includes products and services from all aspects of aid tools. The assortment covers manual wheelchairs, electrical wheelchairs, stair climbing assistance, care beds and care aids from many prominent manufacturers i.e.:

- Meyra, www.meyra.de
- Otto Bock, www.ottobock.de
- Alber, www.alber.de
- Sorg, www.sorgrollstuhltechnik.de
- R82, www.r82.de
- Haverich, www.haverichreha.de

A precise introduction to the usage of the products is part of our comprehensive consultation by our trained specialists.

Rehabilitation technology for children

The focus of the department of Rehabilitation Technology for Children is to manufacture specialized chairs and storage systems according to measurements.

We supply children with therapy assisting products such as standing board or therapy chairs. In addition we adapt products such as wheelchair, buggy's and walking assistance tools to the needs of children. Additional products such as care beds, toilet chairs and bathing assistance tools complete our extensive product range.

Medical house

The medical house has a large selection of high-quality products from prominent German manufacturers i.e.

- Medi, www.medi.de
- Juzo, www.juzo.de
- Jobst, www.jobst.de
- Bauerfeind, www.bauerfeind.de

Bandages and compression socks are the main products in the medical house. The bandages support, relieve, activate and keep the muscles and joints warm. If necessary we also manufacture according to measurements.

During the compression therapy we use compression socks with different sock lengths and compression classes.
